

## TEMPORARY CONICAL GAS STRAINERS

### SERIES CRS & CRL

#### TEMPORARY CONICAL GAS REVERSE FLOW STRAINERS

CRS (Short) & CRL (Long)

Temporary (Conical) Strainers are very low cost pipeline strainers that are designed for new system start-up. They offer protection for process equipment against damage causing contamination present during start-up and commissioning.

#### **Applications:**

Temporary protection during new system start up and system change outs.

Since these strainers are temporary, they need to be installed in a section of pipe such as a removable spool piece. These units should be removed and thrown away after the initial cleaning of the system.

#### **DESIGN INFORMATION**

- Conical strainers can be manufactured in a range of different configurations to suit your specific requirements.
- Conical strainers can be supplied in 304 stainless steel, 316 stainless steel, monel, or other materials.

Notes: Please consult the TM Sales Department or your local sales representative for certified drawings, or additional information.
